

We are experiencing a norovirus (gastrointestinal) outbreak

This common highly contagious acute, sudden onset virus spreads quickly, so we need your help:

- **DO NOT VISIT** if you have experienced nausea, vomiting, diarrhea, or a fever within the past 4 days.
- **STAY HOME for 2 days** after your last symptom.
- Visit only when absolutely necessary and limit visiting to 2 people.
- **CLEAN YOUR HANDS** using alcohol-based hand rub (ABHR) upon entering and exiting the facility, the unit, and the patient/resident room.
- **If the person you are visiting has symptoms WEAR A MASK with an attached face visor for eye protection before entering their room.** You must **clean your hands** before putting on the mask. The mask is removed outside the patient room, followed immediately by **cleaning your hands**.
- Visitors within 6 feet (2 meters) of someone with norovirus who are not wearing a mask with an attached face visor will likely get sick with this illness.
