

IPAC Guidance: Portable Fan Use

Clean and disinfect fans prior to first use, weekly, and when visibly soiled.

Aim fan towards ceiling, avoid aiming directly at the patient/resident.

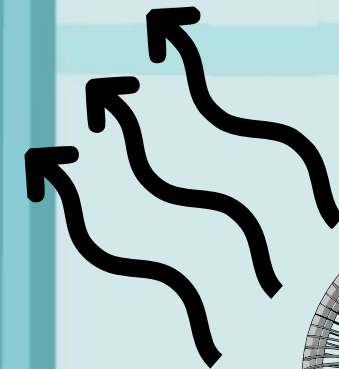

Avoid having fans move air from one patient/resident to the next.

Turn off fans during care and room cleaning by EVS.

To increase air circulation, avoid pointing fan towards door or hallway.

Place fan on a clean, dry, uncluttered surface.

Note: Please contact IPAC for guidance during additional precautions, clusters, and outbreaks.
