

Outbreak Work Surfaces

What is it?

An “outbreak work surface” is a small table with a supply of cleaner/disinfectant wipes placed just outside a precaution room.

What is it for?

The work surfaces provides a place to put the supplies you need in the room while you are donning PPE and when doffing PPE while exiting.

How to use a work surface:

1. Always clean & disinfect the surface before and after use.
2. Plan your care and collect all supplies you will need in the room.
3. Place supplies on the disinfected work surface while you don PPE.
4. Once fully donned take the supplies from the work surface and enter the precaution room.
5. Place supplies on the work surface while doffing mask and eye protection after exiting room.

Keep work surfaces clear. **They are for temporary storage only.**
