

## We are experiencing a viral respiratory illness cluster/outbreak

This common highly contagious acute, sudden onset virus spreads quickly, so we need your help:

- **DO NOT VISIT** if you have experienced fever, chills, new or worsening chronic cough, sore throat, body aches, shortness of breath, runny or stuffy nose, loss of taste/smell, severe weakness or fatigue.
- **STAY HOME** if you feel sick and take prevention measures to limit the spread of infection.
- **CLEAN YOUR HANDS** using alcohol-based hand rub (ABHR) upon entering and exiting the facility, the unit, and the patient/resident room.
- If you are visiting a patient, please report to nursing station or the nursing staff.
